

The CDC Finally Admitted It - Get the Jab, Get COVID

tomrenz.substack.com/p/the-cdc-finally-admitted-it-get-the

I will open by feigning shock... OH MY!!! The CDC has finally shown that if you get the jab you will get COVID!!! But wait... there's more... (at least more feigned shock)... the media is not reporting it???

Okay - back to serious. The CDC has finally shown that it knows that the jab does not work. In fact, according to CDC numbers, clearly the best way to get COVID is to get the jab. How clear you ask? Well look at the CDC table here:

% Fully Vaccinated	Cases per 100k	Number of U.S. Counties at this Level	Percent of U.S. Counties at this Level	Percentage Point Difference Since 7 Days Ago	Number of People Living in U.S. Counties at this Level	Percent of Population Living in U.S. Counties at this Level
0-29%	0-9.9	35	1.1%	0.3%	290,272	0.1%
0-29%	10-49.9	15	0.5%	-0.2%	215,131	0.1%
0-29%	50-99.9	N/A	N/A	N/A	N/A	N/A
0-29%	100+	9	0.3%	0.1%	61,446	0%
30-39%	0-9.9	176	5.5%	0.9%	3,489,049	1.1%
30-39%	10-49.9	218	6.8%	0.7%	4,926,368	1.5%
30-39%	50-99.9	53	1.7%	-0.5%	1,392,496	0.4%
30-39%	100+	31	1%	-1.3%	578,228	0.2%
40-49%	0-9.9	350	10.9%	3.1%	9,037,437	2.7%
40-49%	10-49.9	526	16.4%	-0.4%	22,245,317	6.8%
40-49%	50-99.9	105	3.3%	-1.6%	4,378,864	1.3%
40-49%	100+	63	2%	-1.2%	2,725,928	0.8%
50%+	0-9.9	287	9%	2.3%	12,425,478	3.8%
50%+	10-49.9	837	26.1%	0.1%	125,367,438	38%
50%+	50-99.9	322	10.1%	-1.3%	105,122,616	31.9%
50%+	100+	177	5.5%	-0.8%	37,425,803	11.4%
N/A	N/A	16	N/A	N/A	1,751,346	N/A

This chart can take a minute to understand so let me explain. From top to bottom the table is listed according to the percentage of people in counties around the United States that are fully jabbed. The first and most unmistakable thing about this table is the consistent increase in the “number of people living in US counties at this level”. In fact, a bit of math shows that around 280 million people are living in counties with a 50%+ jab rate compared to around 50 million living in counties with lower jab rates.

This means that if the jabs are working then there would be a huge number of people in the lower tiers of the “cases per 100k” categories but this simply not the case. In fact, in the 50%+ jabbed counties about 51% of the cases per 100k occurred in counties with the higher two categories of cases per 100k. In other words, the jabs just do not work to prevent COVID - at all.

Consider that all of these numbers include built-in bias. The CDC has taken numerous steps to ensure that the jabs look effective even though they are not (for example, they test for cases at different cycle thresholds based on your jab status). There are also large areas of the United States that are no longer participating in the COVID corruption and so they are not reporting to the CDC. Many of these areas likely have higher levels of unjabbed people and are also not experiencing issues with COVID.

Several studies have come out showing that the jabs damage your natural immune system in a cumulative way which means that the more jabs you get the more damage is done to your natural immune system. That, plus the fact that the jabs train your body to make the pathogen (the spike protein) that does the damage when you get COVID mean that getting the jab is the surest way to get COVID. Ultimately the numbers we are seeing around the world demonstrate this by consistently showing one thing - getting the jab does not prevent COVID, it causes it.
